

## **Problem Statement:**

Youth nowadays handle cash without any knowledge of how to deal with it, and when it comes to spending their own cash, it becomes difficult to meet their financial obligations.

So, it is fundamental for them to follow their costs for better administration of their cash and to expand their savings. With the assistance of this application, users can work out their complete expenses each day and these outcomes will be given to the user. As the traditional methods of budgeting, we need to maintain the notes, and files for the user daily and monthly expenses. Keeping a log in diary is a very monotonous process and also may sometimes lead into problems due to the manual calculations. Looking on every one of the above given conditions, we are attempting to fulfil the users necessities by building a web application which will help them decrease their burdens.

"Expense Tracker Application" is an application that allows the user to enter their daily expenses at the end of the day to see their expenses in charts. Based on the analysis of their daily expenses, the application gives suggestions on how to increase their passive income.
